Oh and soil can probably go to a RCRA Subtitle D (nonhazardous) landfill. And no worries if you don't have this info readily available. I have other sources.
Thanks again.

Hello, James and Pam.

I will arrange to have a copy of the final report sent to each of you. It will be placed into some sort of electron drop box for you to download. Once I know who is sending it, I will give you a warning notice so that you expect it.

(b) (6)

I also have two really big projects lined up as soon as the agency allows up in the field for non-emergencies. Small town with residential lawns contaminated with lead in NE Washington and a six-month dismantling of a smelter that is releasing PCBs, asbestos, and cPAHs in Spokane. It's like an OSC's dream-come-true.

Hi Jeff and Pam,
Any updates on the EPA report or the Ecology groundwater samples?
Hope you are both doing well-
Thanks-Jim

Guys,

I'm not sure if I already forwarded the groundwater data to you or not. I saw the entry, not crossed off, on a "to do" list in my log book. If you've already received this, go ahead and delete.

FYI: The final report, detailing EPA's 2018 and 2019 work, including all data, volumes removed, and isolated areas of residual contamination, is due for delivery approximately February 1, 2020.
